

**SYSTEM AND METHOD FOR PROVIDING SEARCH CAPABILITIES AND
STORING FUNCTIONS ON A WIRELESS ACCESS DEVICE**

Abstract

A system and method for enabling users to send and receive messages and
5 other information from mobile devices and enabling users to access server-based
information using mobile devices over wireless data networks are disclosed. The
system and method further provides search capabilities on a wireless device. The
system and method may further provide storing capabilities wherein search data and
other user input and preferences may be stored in a file associated with the wireless
10 client device. The storing capabilities may facilitate searching techniques. In
addition, the storing capabilities may retain user selected preferences, views and other
information for future wireless access.
